1 We have designed the shape of our handle to be smaller and practical in size, so that it uses up to 65% less plastic than some leading brands

2 Instead of using new plastic we use 100% recycled plastic for the brush handle and 50% recycled plastic for the protective cap. This recycled plastic is made using waste materials left over from other manufacturing processes.

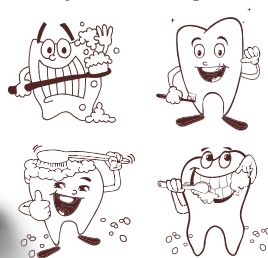

3 Unlike some other brands who package interdental brushes in unnecessarily large plastic boxes and bags, we use a cardboard box which is 100% plastic free. This means the box is easily recyclable

Greenline bamboo cups

Looking to cut down on plastic use? Switching to bamboo cups is a simple and easy change that can have a big impact on reducing plastic waste in your surgery. Here are some reasons to make the switch to using bamboo:

1 Bamboo is the world's quickest growing plant and provides a sustainable source of material. When bamboo is cut down to make paper it is able to quickly recover to be harvested again.

2 Bamboo absorbs a large amount of CO² emissions as it grows, which helps to offset human carbon emissions.

3 Our Greenline outer carton is 100% recyclable.

HOLLOW HANDLE micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

- 1 45% less plastic used in each hollow handle applicator than our standard micro applicator, due to the hollow design of the handle.
- 2 Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.
- 3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

mini micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

- 1 We designed the handle to be a smaller, more practical size that reduces the amount of plastic used by 50% in comparison to our standard micro applicators.
- 2 Instead of new plastic, we used 100% recycled plastic. This recycled plastic is made using waste materials from our other manufacturing processes.
- 3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.

Greenline air-water syringe tips

Reusable products are a great idea. Unfortunately, trying to clean the inside of a reusable metal air-water syringe tip is just not possible and if you can't clean it, you can't guarantee the effectiveness of its sterilisation. This means that using a disposable plastic air-water syringe tip is the only way to guarantee avoiding cross contamination.

1 Our Greenline air-water syringe tips are made from 100% recycled plastic, using waste materials left over from other manufacturing processes.

2 The Greenline air-water syringe tips are packaged in 100% recyclable cardboard boxes, instead of large plastic bags, helping to reduce the amount of plastic packaging in your surgery.

EDENTA SOFT TISSUE TRIMMER FG

Tissue Trimmer STT/FG-Shank:
Designed for soft-tissue surgery, the STT ceramic tissue trimmer is a rotary instrument that can be used as an alternative to electrosurgery and surgical blades. The biocompatible hard oxide point is said to cut tissue without burning. Applications include modelling gingiva, opening the sulcus for impression, freeing deep cavities, lacerating inter-radicular granulation-tissue, removing gingival hyperplasia/papillectomies, and exposing intra-osseous implant sections and retinated teeth.

Speed: Air turbine 300.000 - 500.00 rpm To be used without any water/spray cooling

HOLLOW HANDLE micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

1 45% less plastic used in each hollow handle applicator than our standard micro applicator, due to the hollow design of the handle.

2 Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.

3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

CONTINU DISINFECTANT FOR DENTAL UNIT WATER LINES

- HTM 01-05 states that, "no currently available single method or device will completely eliminate biocontamination of dental unit water lines or exclude the risk of cross-infection"
- CE marked for use with medical appliances, Continu Disinfectant for Dental Unit Water Lines is highly effective at eliminating biofilm to achieve long term reduction in microbial contamination
- Yet, being water based, it is very gentle, making it harmless to water lines and safe for patients
- As the disinfectant only needs to be applied weekly, it saves staff time and provides a cost effective solution
- Available in one litre bottles or economic and environmentally friendly five litre refills

NU016 Refill 5 litres **£24.95 bottle**

CONTINU HAND SOAP & SANITISER FOAM POUCHES

- Continu alcohol free antimicrobial hand wash and sanitising foam products are available in sealed disposable cartridges and wall mounted dispensers to comply with HTM 01-05 but unlike alcohol based alternatives they are very kind to skin
- The wall mounted touch free unit is particularly economical as it dispenses 0.4 ml each time it is used so a single one litre pouch provides 2,500 applications.

A user-friendly, ergonomic handle with special grip recess ensures enhanced control for reliable use of the StripFIX finishing system. The click-plug system enables easy, quick replacement of the diamond strip holders. The swivel-mounted diamond strip holders can each be locked in 4 positions.
