Who are we?

At **Premium Plus**, manufacturing dental products is what we do. Only for the past decade we've not just made dental products... we've made better dental products.

Through innovation, research, investment in manufacturing, technical know-how and over 40 years experience in the dental trade, we've learned how to control and improve every step of the manufacturing process... and that's a huge advantage to our customers.

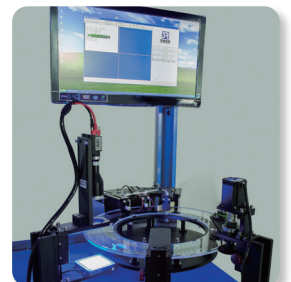

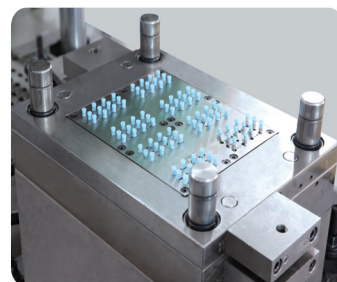

With a global view of the dental industry and knowledge of the different geographical markets, we have learned to understand what you expect and are committed to far exceeding your requirements. Our customers also benefit from our centrally located warehouse in Europe.

Why choose us?

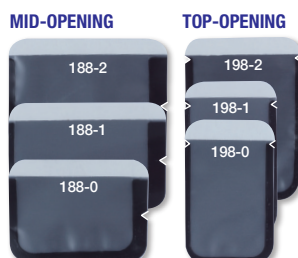

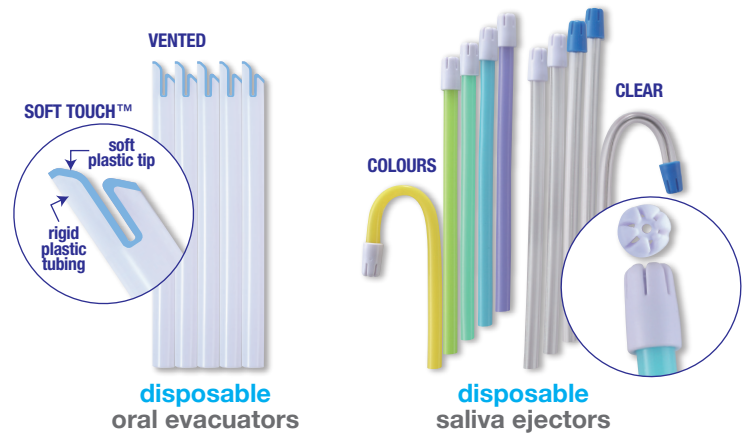

Whether its under our own **Premium Plus** brand, private labels or OEM projects, our emphasis is on quality for not only the products, but also its presentation. We not only manufacture in-house - We innovate and develop products, research raw material selection, manufacture moulds, construct production lines, create and design artwork and packaging for our partners, warehouse goods and turn our customers' ideas and requests into reality... providing the complete package.

Our continual investment in purpose-built machinery, technical training and market research along with our flexible approach keeps us at the forefront of dental manufacturers.

What do we make?

Over the past decade our range has increased to cover small equipment and the majority of plastic and paper disposable dental products. This gives us, and more importantly you, the ability to offer a huge range that includes LED curing lights, apex locators, handpieces, disposable prophy cups and angles, micro applicators, syringe tips, barrier sleeves, saliva ejectors and suction tubes etc.

disposable PSP barrier envelopes

Where are we?

Premium Plus now supplies to over 90 countries and regions throughout the world and has distribution partners in the USA, Japan, Poland and the United Kingdom. The manufacturing site in China is constantly working on not only maintaining but exceeding standards set by ISO, CE and FDA. We are proud of the fact that we hold **ISO13485: 2016** certification for the **Quality Management System of Medical Devices** and have all of the class IIa products manufactured by us certified with the **CE0123** mark by **TUV SUD**. We know that with our experience, our integrated range of production processes and our ever-expanding range we have the ability to cover all our customers' requirements.

100pcs barrier sleeves, power adaptor

C03-C CARBOLITE LED CURING LIGHT

with direct light source

- **High Grade Aluminum Body**
Construction durability and provides unsurpassed heat dissipation
- **8 Modes**
Normal, High, Turbo, Ortho, Pulse, Ramp, Caries Detection, Soft
- **Caries Detection**
For detecting caries, calculus and cracked teeth
- **4 Micro Cure Lens**
A different micro cure lens to cover every need
- **Collimated Light Beam**
A 10 mm collimated light beam that produces a multi wave length 385 nm - 515 nm to cure most products on the market
- **Constant Circuit Intensity Output**
Automatic compensation circuit for constant power output and a fast charge base that includes a built-in light indicator

C03-C SPECIFICATIONS		
DIRECT LIGHT HEAD		10 mm (dia.)
LIGHT WAVELENGTH		385~515 nm
APPLICATION		General / Ortho
MODE	NORMAL	1,200 mW/cm² for 5, 10, 15, 20 seconds ±10%
	HIGH	2,000 mW/cm² for 1, 3, 5 seconds ±10%
	TURBO	3,000 mW/cm² for 1, 3 seconds ±10%
	ORTHO	Ortho x 05 2,500 mW/cm² for 5 x 3 seconds with 1s interval ±10% Ortho x 10 2,500 mW/cm² for 10 x 3 seconds with 1s interval ±10%
	PULSE	1,200 mW/cm² for 5, 10, 15, 20 seconds with 0.2 seconds off ±10%
	RAMP	1st five seconds from 0~1,200 mW/cm² next 5, 10, 15 seconds 1,200 mW/cm²
	CHECK	Purple light for 30 or 60 seconds
	SOFT	900 mW/cm² for 5, 10, 15, 20 seconds ±10%
WEIGHT		110 gms
LENGTH		224 mm

CURING LIGHT MODE APPLICATIONS	
NORMAL	For general applications.
HIGH	For quick curing of resin and composites that are no more than 2mm thick. Also recommended for ceramic brackets, bonding veneers etc.
TURBO	For super fast curing of resin and composites that are no more than 2mm thick. Also recommended for ceramic brackets, bonding veneers etc.
ORTHO	For orthodontic applications. 3 second mesial + 3 second distal for metal brackets resin bonding (with 1 sec blink in-between).
PULSE	Pulse effectively reduces heat generation, efficiently dissipates heat shrinkage and ensure comfort during treatment.
RAMP	First 0~5 seconds are ramped for general applications.
CHECK	For detecting caries, calculus and cracked teeth.
SOFT	First 0~5 seconds are ramped for more gentle processing, designed for patients sensitive to heat.

LENS	APPLICATION
MICROCURE LENS	For curing small and medium sized restorations tacking of veneers
2.2mm & 3.0mm MICROCURE BALL LENS	Holds matrix against contact while curing composite for Class II restorations
ENDO GUIDE LENS	For curing at the apex of the tooth and other limited areas

12 MONTH WARRANTY

A different microcure accessory cap to cover every need.

a. Endo Guide Lens

The mini light guide is suitable for curing apex position of the tooth and other limited areas.

b. 3.0 mm Microcure Ball Lens

Facilitates the building of convex proximal contacts. The imprint is easily filled with composite in a second step, push the Microcure Ball Lens against the interproximal wall of the band, do not submerge in composite.

c. 2.2 mm Microcure Ball Lens

Facilitates the building of convex proximal contacts. The imprint is easily filled with composite in a second step, push the Microcure Ball Lens against the interproximal wall of the band, do not submerge in composite.

d. Microcure Lens

It provides pinpoint curing of small composites and is helpful for tack curing veneers.

Caries Detection

Purple light for 30 or 60 seconds for detecting caries, calculus and cracked teeth.

The carbolite helps detect caries by emitting specific wave lengths that induce different fluorescence in healthy and decayed dental tissue. This allows dentists to visually distinguish between healthy enamel and carious lesions.

High Grade Milled Aluminium Body

Ensures superior strength, durability, and effective heat dissipation. Its sleek, slim design and optimal weight make the handpiece practical, easy to handle and exceptionally comfortable to use.

10 mm Head

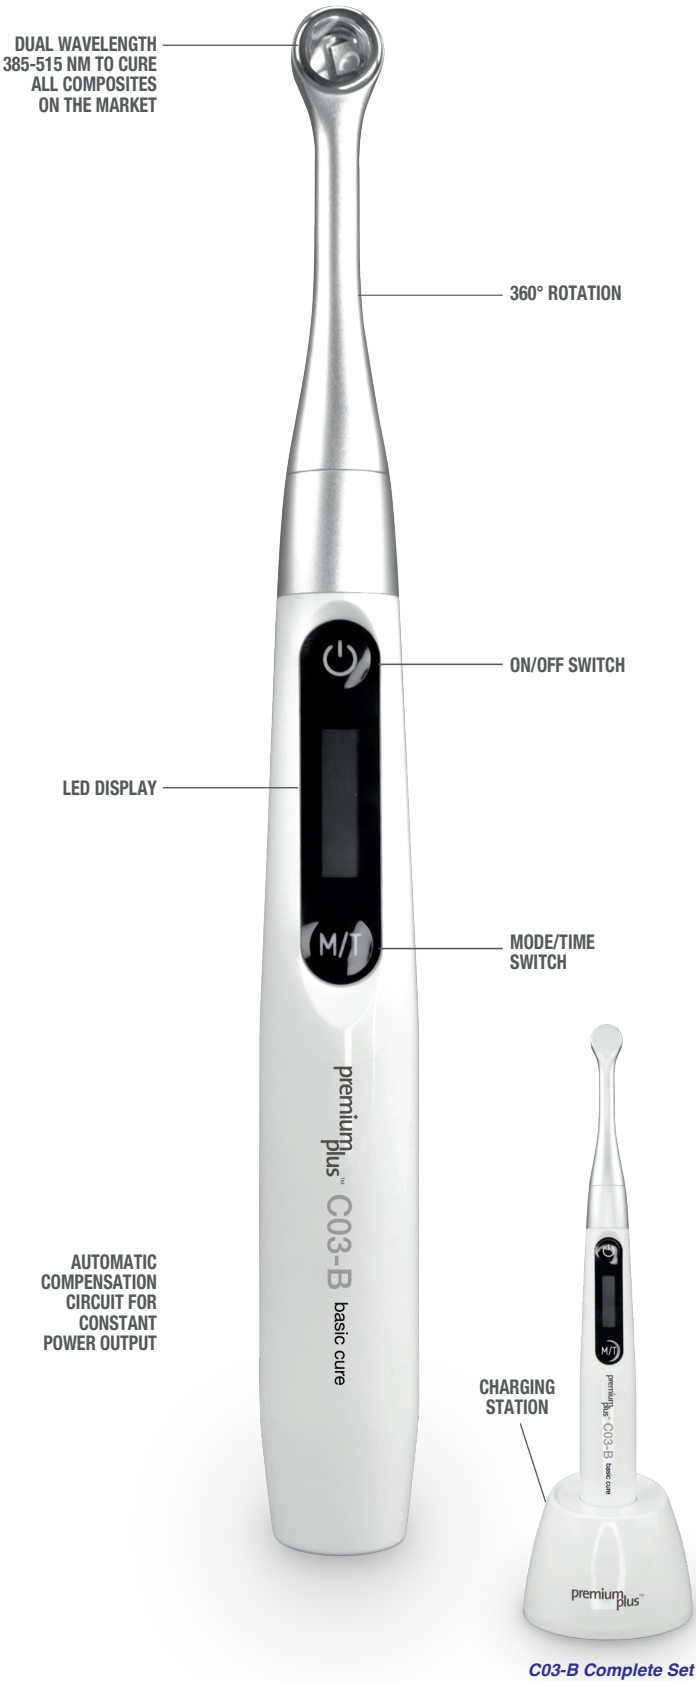

Our ergonomically designed 10mm head produces an output of up to 3000 mW/cm² and a dual wave length of 385-515 nm. Powerful enough to cure in seconds, the full range of the most popular light cured products on the dental market today.

Customized LED chip and filters produce a collimated output that maintains a consistent curing beam.

An inbuilt light indicator to keep track of the radiance of the curing light on an easy to read OLED screen.

C03-B BASIC CURE LED CURING LIGHT

with direct light source

- **Unbeatable Value**
High-performance curing light with advanced features at a budget-friendly price.
- **Four Versatile Modes**
Tailored modes to meet every clinical need, from quick curing, orthodontics and general applications.
- **Dual Wavelength Technology**
Effectively cures all composite materials on the market.
- **Compact Low-Profile Head**
Easily reaches hard-to-access areas, ensuring precision and ease of use.
- **LED Display**
Provides clear, real-time information for seamless operation.
- **Convenient Charging Base**
Always charged and ready to use
- **Constant Power Output**
Automatic compensation circuit ensures consistent performance, even with a low battery.

REMARKS: Above data is based on test results using an A2 shade composite. The light guide tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades. All resins and composites have different curing times. It is strongly recommended that you should test your composite and resin performance to determine the curing times required.

Data is only for reference, always follow the instructions from your resin and composite manufacturers.

- There are many variables (distance and angle between the light tip and composite, area, shade, thickness and type etc.) affecting composite curing times. It is recommended to place and cure a maximum of 2 mm for each composite placement.
- Using a barrier sleeve on the curing light will reduce 5-10% of light intensity.
- The light guide tip should be placed approximately 1-2 mm above the composite or resin and pointed perpendicular to the tooth surface.
- High intensity curing lights produce more heat. This is a direct indication of the power of the light being emitted. When using the device for more than 10 seconds, do not keep the light tip in one position. It is always recommended to use a dental syringe to blow a cold air flow on the area during long periods of curing. This will maintain a lower temperature for the composite and surrounding area, particularly when using rubber dam so as to avoid any rubber dam breakage due to heat built-up.
- Do not expose soft tissue to the light being emitted for more than 2 seconds or burns may occur.
- Avoid the light guide tip coming into contact with any soft tissue in the mouth.

RAMP	10 seconds	4.8 mm	2.40 mm	10 seconds	4.9 mm	2.45 mm
SOFT CURE	15 seconds	5.0 mm	2.50 mm	15 seconds	5.1 mm	2.55 mm

REMARKS: Above data is based on test results using an A2 shade composite. The light tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades. All resins and composites have different curing times. It is strongly recommended that you should test your composite and resin performance to determine the curing times required.

Data is only for reference, always follow the instructions from your resin and composite manufacturers.

- There are many variables (distance and angle between the light tip and composite, area, shade, thickness and type etc.) affecting composite curing times. It is recommended to place and cure a maximum of 2 mm for each composite placement.
- Using a barrier sleeve on the curing light will reduce 5-10% of light intensity.
- The light tip should be placed approximately 1-2 mm above the composite or resin and pointed perpendicular to the tooth surface.
- High intensity curing lights produce more heat. This is a direct indication of the power of the light being emitted. When using the device for more than 10 seconds, do not keep the light tip in one position. It is always recommended to use a dental syringe to blow a cold air flow on the area during long periods of curing. This will maintain a lower temperature for the composite and surrounding area, particularly when using rubber dam so as to avoid any rubber dam breakage due to heat built-up.
- Do not expose soft tissue to the light being emitted for more than 2 seconds or burns may occur.
- Avoid the light tip coming into contact with any soft tissue in the mouth. As an option, you may cover the entire curing light with a disposable sleeve and then place the Heat Protective Ring (included inside the packing box) onto the light tip covered with sleeve as shown below. Ensure the Heat Protective Ring is securely positioned on the curing light before starting the cure.

DISPOSABLE 60° TURN RECIPROCATING LATEX FREE PROPHY ANGLES

NO SPLATTER - The centrifugal force generated by a normal 360° turn prophy angle results in splattering and mess. Our **NEW 60° turn reciprocating** prophy angles eliminates potential splattering of prophy paste, blood and saliva, keeping the prophy paste in the cup where it belongs.

NO HEAT - Our **NEW 60° turn reciprocating** prophy angles build up much less heat during use, assuring a smooth, cool treatment for your patient.

EFFECTIVE - Due to less heat generated during use, if necessary more pressure may be applied to remove stubborn stains.

FASTER - Thanks to our innovatively designed **NEW 60° turn reciprocating** prophy angles, the prophy cup or brush can be used continuously on the tooth surface, saving valuable chair time.

SAFER - The rotational motion of traditional prophy cups and brushes can cause laceration and bleeding of the gums. Our **NEW 60° turn reciprocating** prophy angles provide a much safer and pain-free prophylaxis treatment.

Greenline air-water syringe tips

Reusable products are a great idea. Unfortunately, trying to clean the inside of a reusable metal air-water syringe tip is just not possible and if you can't clean it, you can't guarantee the effectiveness of its sterilisation. This means that using a disposable plastic air-water syringe tip is the only way to guarantee avoiding cross contamination.

- Directly interchangeable with American type syringe tips (long), or European syringes which have been converted to use American type syringe tips (short)
- Made from 100% recycled plastic
- No sharp edges for patient comfort
- Unique quad air core design to ensure dry air
- Cardboard packaging which is easily recyclable

Greenline Air-water Syringe Tips 200 pcs/box
G-018 (American Type)
G-028 (European Type)

1 Our Greenline air-water syringe tips are made from 100% recycled plastic, using waste materials left over from our other manufacturing processes.

2 The Greenline air-water syringe tips are packaged in 100% recyclable cardboard boxes, instead of large plastic bags, helping to reduce the amount of plastic packaging in your surgery.

Greenline bamboo cups

- Leakproof construction, non-slip design
- Dispenses easily from cup dispenser due to their rolled lip
- Conveniently designed 170ml (6oz) size

Looking to cut down on plastic use? Switching to bamboo cups is a simple and easy change that can have a big impact on reducing plastic waste in your surgery.

Here are some reasons to make the switch to using bamboo:

1 Bamboo is the world's quickest growing plant and provides a sustainable source of material. When bamboo is cut down to make paper, it is able to quickly recover to be harvested again.

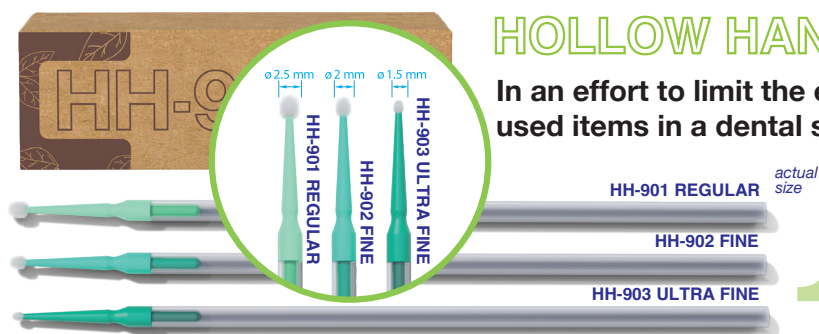

2 Bamboo absorbs a large amount of CO₂ as it grows, which helps to offset human carbon emissions.

3 Our Greenline outer carton is 100% recyclable.

HOLLOW HANDLE micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

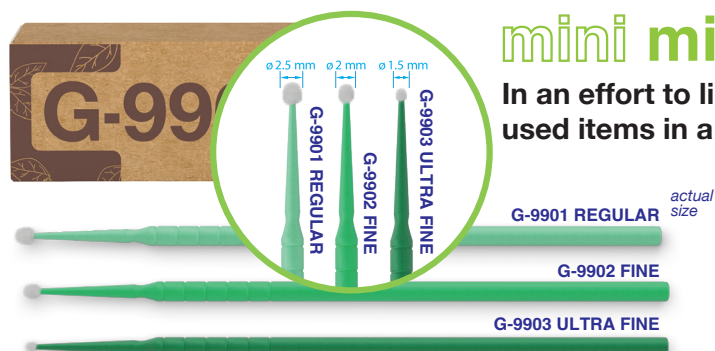

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Hollow Handle Micro Applicators 100 pcs/box
(Length 100 mm, dia 3 mm handles)
HH-901 Regular (dia. 2.5 mm) Light Green
HH-902 Fine (dia. 2 mm) Medium Green
HH-903 Ultra Fine (dia. 1.5 mm) Dark Green

- 1 45% less plastic used in each hollow handle applicator than our standard micro applicator, due to the hollow design of the handle.
- 2 Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.
- 3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

mini micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

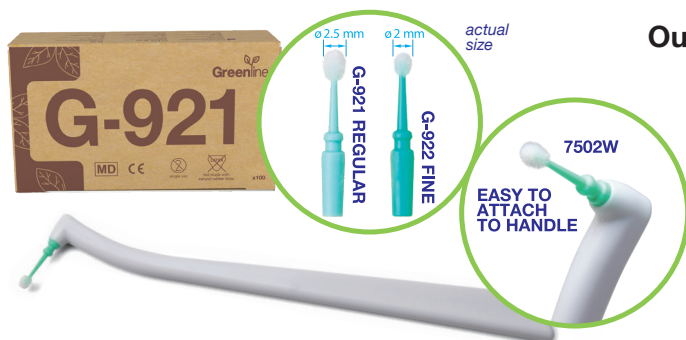

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Mini Micro Applicators 100 pcs/box
(Length 85 mm, dia 2.5 mm handles)
G-9901 Regular (dia. 2.5 mm) Light Green
G-9902 Fine (dia. 2 mm) Medium Green
G-9903 Ultra Fine (dia. 1.5 mm) Dark Green

- 1 We designed the handle to be a smaller, more practical size that reduces the amount of plastic used by 50% in comparison to our standard micro applicators.
- 2 Instead of new plastic, we used 100% recycled plastic. This recycled plastic is made using waste materials from our other manufacturing processes.
- 3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

micro applicator tips

Our most environmentally friendly micro applicators:

- For the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

Greenline Micro Applicator Tips 100 pcs/box
G-921 Regular (dia. 2.5 mm) Light Green
G-922 Fine (dia. 2 mm) Medium Green
Autoclavable Micro Applicator Tip Handle
7502W White
7502T Transparent

- 1 By using a micro applicator tip with a reusable handle, you can reduce the amount the plastic that you would normally use by 80% when compared to a standard micro applicator.
- 2 Using an autoclavable handle saves plastic. Clean it, autoclave it and re-use it. Simple and effective.
- 3 Our micro applicator tips are packaged in a 100% recyclable cardboard box. Recycling can prevent pollution by reducing the need to collect new raw materials.
- 4 Instead of using new plastic for the micro applicator tips, we use 100% recycled plastic. The recycled plastic is made using waste materials from our other manufacturing processes.

Welcome to our new Greenline. We believe that making simple changes to the everyday products you purchase is the easiest way to help our planet. This range is our first step towards offering you the choice of more environmentally friendly products.

After scratching our heads, we've created our interdental brushes with a few 'ez' changes:

ez interdental brushes

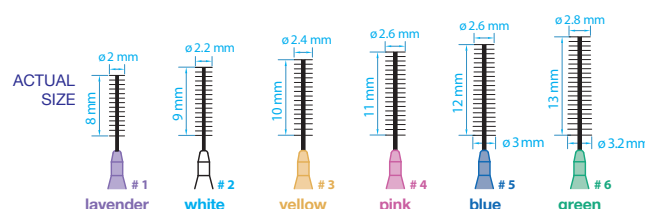

- ISO size (colour coded)
- Latex and BPA free
- Reusable
- Cardboard box
- Non-slip, easy grip design
- Small, compact and easy to carry

Interdental Brushes, ISO Size No. 1-6
Single or Assorted Sizes, 6 pcs/box

1 We have designed the shape of our handle to be small and practical in size, so that it uses up to 65% less plastic than other leading brands

2 Instead of using new plastic, we use 100% recycled plastic for the brush handle and 50% recycled plastic for the protective cap. This recycled plastic is made using waste materials left over from other manufacturing processes.

3 Unlike some other brands who package interdental brushes in unnecessarily large plastic boxes and bags, we use a cardboard box which is 100% plastic free and easily recyclable

Safe Tip

- A new root canal NiTi file system has been created using thermal activation, laser quenching and nano-coating
- Surface hardness of the file is increased by 168%
- Abrasion resistance increases greatly, improving the service life by 3-10 times

- High strength - excellent corrosion and wear resistance, biocompatibility and high damping properties
- Hyperelastic - super elasticity, will still recover shape after countless bending
- Easy to shape - thermal activation of the NiTi wire, allows the file to be easily shaped so as to adapt to the natural form of the root canal
