the applicator range

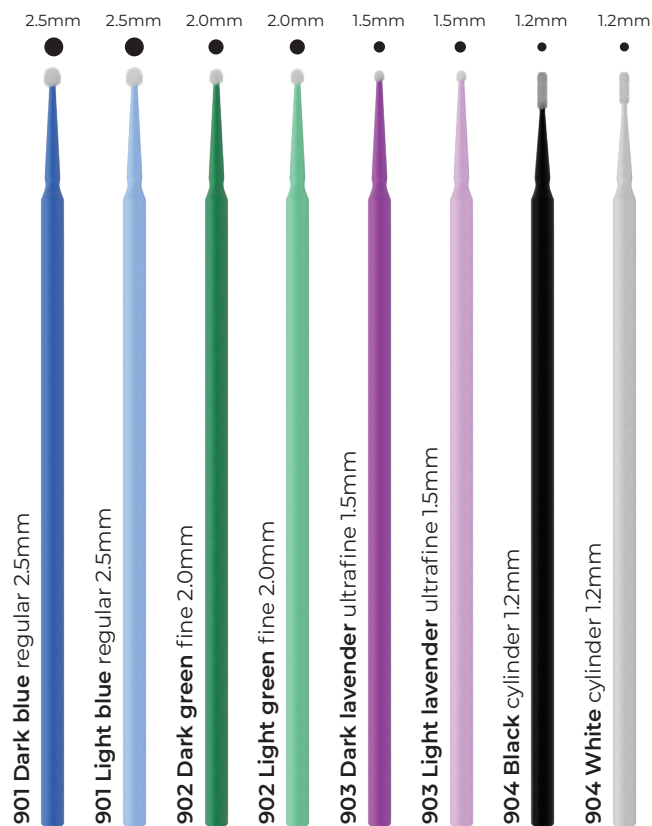

a complete range of applicators and
brushes for every dental application

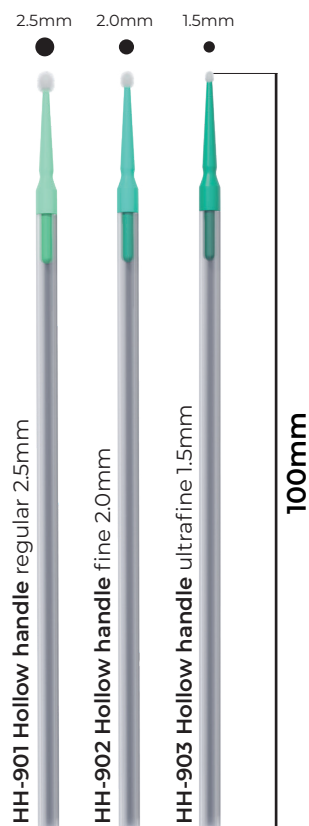

our applicator range

In dental clinics every day, applicators enable precise application of various substances within the mouth. These tools are designed for accurate delivery during a range of procedures, supporting controlled treatments for purposes such as: topical anaesthetics, gels and medications, fluoride treatments, bleaching agents, etching solutions, sealants and orthodontic appliances, crowns and veneers.

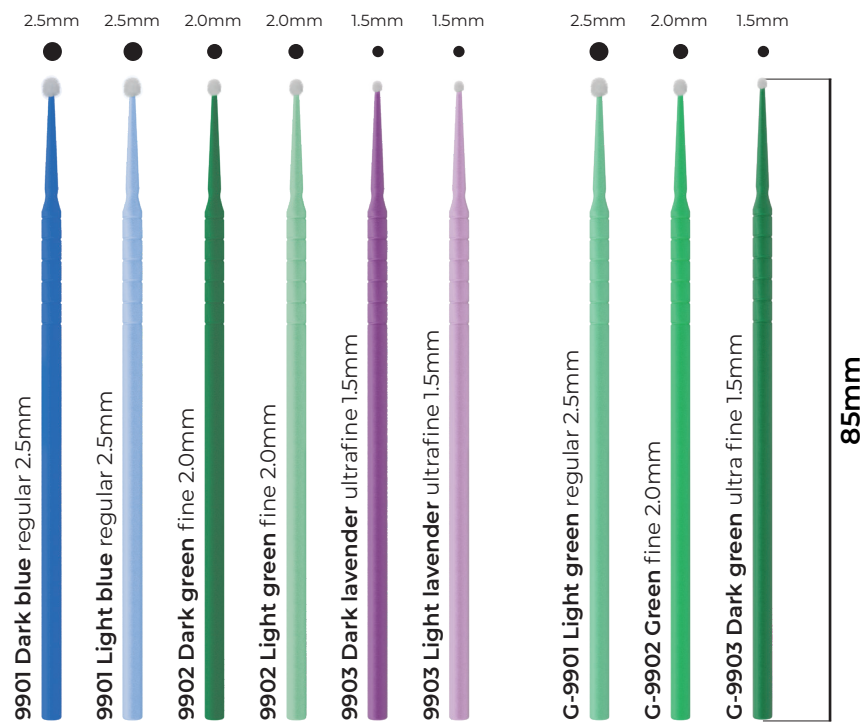

We offer a comprehensive selection of single use applicators to meet various requirements, featuring an extensive range of colours, sizes and packaging choices. Additionally, we provide an environmentally conscious option to address concerns associated with disposable plastic usage.

microapplicator mini handles

All the advantages of our regular handle microapplicators, such as the accurate application of dental materials, are retained, but now with a decreased plastic content. This change not only leads to cost savings but also aligns with our commitment to environmental sensitivity. Emphasizing reduced plastic usage is consistently a more favorable approach.

- bends into any angle required and stays with no “rebound”

microapplicator hollow handles

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

1. 45% less plastic used in each hollow handle applicator than our standard microapplicator, due to the hollow design of the handle.
2. Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.
3. No more dispenser that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

Greenline microapplicator mini handles

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

1. We designed the handle to be a smaller, more practical size that reduces the amount of plastic used by 50% in comparison to our standard microapplicators.
2. Instead of new plastic, we used 100% recycled plastic. This recycled plastic is made using waste materials from our other manufacturing processes.
3. No more dispenser that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

Greenline microapplicator tips

Our most environmentally friendly microapplicators:

1. By using a microapplicator tip with a reusable handle, you can reduce the amount the plastic that you would normally use by 80% when compared to a standard microapplicator.
2. Using an autoclavable handle saves plastic. Clean it, autoclave it and re-use it. Simple and effective.
3. Our microapplicator tips are packaged in a 100% recyclable cardboard box. Recycling can prevent pollution by reducing the need to collect new raw materials.
4. Instead of using new plastic for the microapplicator tips, we use 100% recycled plastic. The recycled plastic is made using waste materials from our other manufacturing processes.

dispensers

Efficiency

Dispensers are designed to streamline the process of accessing microapplicators. They provide easy access to individual applicators, saving time and effort during procedures.

Hygiene and Cross-Contamination Prevention

Dispensers protect the microapplicators from potential contaminants and airborne particles, ensuring a clean environment. This reduces the risk of cross-contamination between patients or different applications.

Organized Storage

Dispensers provide organized storage for microapplicators, preventing clutter and ensuring that the tools are readily available when needed. This can improve the overall efficiency of the workspace.

Professional Image

The use of dispensers can enhance the professional image of a workspace or practice by showcasing an organized and efficient approach to procedures.

Simply twist to break bond

Retains adhesive for several applications on single patients treatment

valustick sticky applicators

Valustick introduces an innovative solution tailored to dental restorations. Its adhesive tip offers a secure way to position and maintain delicate and small components like veneers, crowns, brackets, and more. Once placed, the applicator can be easily removed with a simple twist. Notably, valustick retains its adhesive properties, enabling multiple uses within a single patient's treatment.
