EDENTA KT856 / KT881 KT DIAMOND CROWN CUTTERS FG

For cutting all-ceramic restorations such as zirconium oxide and other all-ceramic materials. The exceptional stability of the special diamond grit provides for a long service life of the KT diamond instruments. The multilayer electroplated bond prevents the diamond grit from loosening prematurely. This results in an optimal removal rate with low vibrations when cutting all-ceramic materials. The crown cutter KT856 is to be placed at an angle of 45°. To remove an all-ceramic restoration, the restoration must be slit along its axial wall towards the centre of the occlusal surface or the incisal edge. The restoration is then bent open with a suitable instrument (lever), causing it to fracture. The KT881 is suitable for grinding off fragment residues. Speed ideally 160,000 rpm, contact pressure < 2 N

- Optimal cutting geometry
- Virtually vibration-free
- High material reduction
- Long term performance

Pilot burs have become indispensable for ensuring successful implantology. The requirements of these instruments are a high cutting capacity, reliable, quick cleaning and a high stability for cost-effective reuse. The highest quality stainless steel cuts very sharply. Additional hardening procedures of the steel ensure an economical service life.

The electrical polish ensures smooth surfaces, on which nothing sticks. The instruments can be easily cleaned and simplify preparation.

NTI MADC DEPTH MARKERS RA

by Dr Mark J. Caldwell, USA

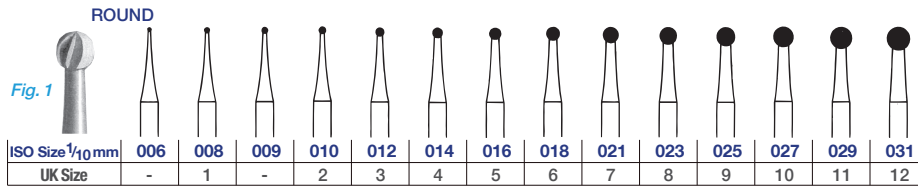

Depth marking for all areas of crown and bridgework.

All-porcelain and CAD/CAM produced restorations place high demands on dental preparations. The success of a restoration depends to a high extent upon the compliance of the minimal wall thickness of the restoration (Teamwork 6/2007; Prof. Dr. Frankenberger et al.).

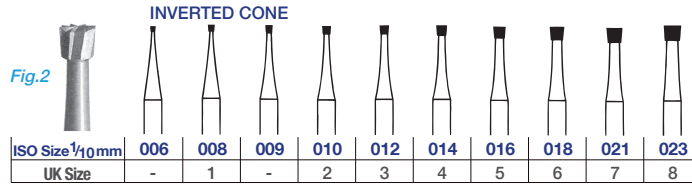

With these eight instruments it is possible to define the prepared margin at the depths of 0.3 to 2.0 mm.

MADC20 - Perfectly suited for occlusal all ceramic preparation

DISPOSABLE 60° TURN RECIPROCATING LATEX FREE PROPHY ANGLES

NO SPLATTER - The centrifugal force generated by a normal 360° turn prophy angle results in splattering and mess. Our NEW 60° turn reciprocating prophy angles eliminates potential splattering of prophy paste, blood and saliva, keeping the prophy paste in the cup where it belongs.

NO HEAT - Our NEW 60° turn reciprocating prophy angles build up much less heat during use, assuring a smooth, cool treatment for your patient.

EFFECTIVE - Due to less heat generated during use, if necessary more pressure may be applied to remove stubborn stains.

FASTER - Thanks to our innovatively designed NEW 60° turn reciprocating prophy angles, the prophy cup or brush can be used continuously on the tooth surface, saving valuable chair time.

SAFER - The rotational motion of traditional prophy cups and brushes can cause laceration and bleeding of the gums. Our NEW 60° turn reciprocating prophy angles provide a much safer and pain-free prophylaxis treatment.

WARNING: USE OF THESE 60° TURN RECIPROCATING PROPHY ANGLES IS EXTREMELY ADDICTIVE
Once you've tried them, you will never want to use any other prophy angles again

EDENTA ORTHOFLEX POLISHERS RA (adhesive remover)

OrthoFlex Polisher (adhesive remover)

There are several methods used for removal of residual resin after debonding of orthodontic brackets. Therefore, the method of removal of the residual resin is very important to avoid damages on enamel. However, carbide burs are harder than enamel and when used at high speed, can damage the underlying enamel. We recommend using our newly developed OrthoFlex Polisher which produces the finest scratch pattern with the least enamel loss. Advantages of the OrthoFlex polisher: Used for reliable, gentle removal of residual adhesive without damaging the natural tooth structure achieved by a special grit, which despite having a high polishing capacity is not harder than the natural tooth structure. Especially reliable alternative to adhesive or cement residue removal using rotary diamond or metal instruments. After removal of the adhesive the teeth are re-polished using: Exa Cerapol 1 = pre-polishing enamel, 2 = polishing enamel, Cerapol Super 3 = natural high-lustre polish.
