SOFT	15 seconds	4.6 mm	2.30 mm	15 seconds	4.8 mm	2.40 mm

REMARKS: Above data is based on test results using an A2 shade composite. The light tip was placed above and pointed perpendicular to the composite. Tests were done as per ISO 4049 Standard. The samples were measured and the data was divided by two (50% of the total composite depth cured). ISO 4049 Standard requires that the results for class II restorative materials should be at least 1.5 mm for non-opaque shades and 1.0 mm for opaque shades. All resins and composites have different curing times. It is recommended that you should test your resins and composites performance to determine the curing times required.

SHORT BALL

LONG BALL

Microcure Ball Lens

Facilitates the building of convex proximal contacts. The imprint is easily filled with composite in a second step, push the Microcure Ball Lens against the interproximal wall of the band, do not submerge in composite.

C

D

Microcure Lens

It provides pinpoint curing of small composites and is helpful for tack curing veneers.

Endo Guide Lens

The mini light guide is suitable for curing apex position of the tooth and other limited areas.

INTEGRATE E88 ENDOMOTOR & E98 APEX LOCATOR WITH CONNECT FUNCTION!

- e88 Endomotor screen mirrors the e98 Apex Locator screen
- Auto Start and Stop
- Apical Reverse
- Apical slowdown

The e88 Endomotor integrates with the e98 Apex locator to provide real-time feedback on the file's location within the root canal. This seamless connection ensures accurate working length determination during canal preparation, minimising the risk of over-instrumentation or under-instrumentation and enhancing precision and safety in endodontic treatments.

CONTINU HAND SOAP & SANITISER FOAM

- At least an alcohol free disinfection solution that can be used safely on skin without causing dryness or irritation
- Users say that Continu has a conditioning effect even with constant use
- Some customers have also reported that after using Continu, dermatitis and other skin conditions have diminished
- Continu hand sanitisers are available either as a disinfectant foam for use without water between patients or as an antimicrobial soap for surgical scrubs and to clean hands between sessions

NU008 Anti Microbial Hand Santising Foam 600 ml ... **£5.95 pack**
 NU009 Anti Microbial Hand Santising Soap 600 ml **£7.45 pack**
 NU014 Wall mounted Bracket for above **£20.95**

CONTINU DISINFECTANT FOR DENTAL UNIT WATER LINES

- HTM 01-05 states that, "no currently available single method or device will completely eliminate biocontamination of dental unit water lines or exclude the risk of cross-infection"
- CE marked for use with medical appliances, Continu Disinfectant for Dental Unit Water Lines is highly effective at eliminating biofilm to achieve long term reduction in microbial contamination
- Yet, being water based, it is very gentle, making it harmless to water lines and safe for patients
- As the disinfectant only needs to be applied weekly, it saves staff time and provides a cost effective solution

NU016 Refill 5 litres **£19.95 bottle**

CONTINU HAND SOAP & SANITISER FOAM POUCHES

- For hand washing, HTM 01-05 requires that "wall mounted liquid hand wash dispensers with disposable cartridges should be used ... Refillable hand wash containers should not be used"
- Continu alcohol free antimicrobial hand wash and sanitising foam products are available in sealed disposable cartridges and wall mounted dispensers to comply with HTM 01-05 but unlike alcohol based alternatives they are very kind to skin
- The wall mounted touch free unit is particularly economical as it dispenses 0.4 ml each time it is used so a single one litre pouch provides 2,500 applications.

NU025 Hand Foam Pouch for Dispenser 800 ml ... **£8.95 pack**
 NU026 Hand Wash Pouch for Dispenser 800 ml **£9.95 pack**

ALCOHOL SURFACE CLEANING WIPES

Continu hard surface alcohol 70% IPA disinfectant wipes proven effective against Enveloped Viruses, Yeast, Bacteria and many more.

- Quick drying solution that leaves no residue after application.
- Designed for professional use
- Rapid anti Microbial action for effective disinfection

NU7600 Alcohol surface cleaning & disinfectant wipes 200's **£5.35**

CONTINU SURFACE CLEANER & DISINFECTANT

- Continu complies with the HTM 01-05 requirement to clean surfaces with a suitable detergent
- The surface cleaner offers a 2 in 1 solution that removes dirt or grease whilst disinfecting the treated area to ensure surfaces are clean as well as decontaminated
- Available in 750 ml trigger spray containers or impregnated wipes
- For a more cost-effective and environmentally friendly solution, refills are available for all Continu wipes and sprays

NU002 2 IN 1 Surface Cleaning & Disinfectant Wipes 200's **£5.95 cannister**
 NU004 x 2 IN 1 Surface Cleaning & Disinfectant Wipe Refill 200's . **£4.95 cannister**

 NU007 2 IN 1 Surface Cleaning & Disinfectant Refill 5 litres **£23.95 bottle**

CONTINU DENTAL INSTRUMENT CLEANER

- HTM 01-05 says that "effective cleaning of dental instruments before sterilisation is of the utmost importance to reduce the risk of transmission of infectious agents"
- The Continu Dental Instrument Cleaner is a concentrated solution that should be diluted to 5%
- It is ideal for pre-cleaning instruments as it is so gentle that it will not damage equipment but the surfactant is sufficiently powerful to remove debris
- HTM 01-05 states, "Alcohol has been shown to bind blood and protein to stainless steel. The use of alcohol with dental instruments should therefore be avoided."
- The Continu Instrument cleaner has been shown in tests against leading alcohol based alternatives to eliminate protein from surfaces
- Available in a 1 litre bottle with measuring cap that delivers 20 litres of cleaning solution or a cost effective 5 litre refill that produces 100 litres, the Instrument Cleaner is for use on dental equipment

NU017 Concentrate 1 litre (make 20 litres) **£16.95 bottle**
 NU018 Concentrate 5 litres (make 100 litres) **£49.95 bottle**

CONTINU FLOOR CLEANER

- 2 in 1 cleaner and floor disinfectant
- One 5 litre bottle concentrate makes 20 litres of cleaning product
- Cost effective alternative to bleach based detergents
- Independently tested against bacterial, fungicidal and virucidal activity to exceed European Standards

Welcome to our Greenline. We believe that making simple changes to the everyday products you purchase is the easiest way to help our planet. This range is our first step towards offering you the choice of more environmentally friendly products.

HOLLOW HANDLE micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

- Bends into any angle for the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

1 45% less plastic used in each hollow handle applicator than our standard micro applicator, due to the hollow design of the handle.

2 Instead of using new plastic, we use 100% recycled plastic for the brush tip and 50% recycled plastic for the hollow handle. This recycled plastic is made using waste materials left over from our other manufacturing processes.

3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

mini micro applicators

In an effort to limit the environmental effect of one of the most used items in a dental surgery we came up with some great ideas:

1 We designed the handle to be a smaller, more practical size that reduces the amount of plastic used by 50% in comparison to our standard micro applicators.

2 Instead of new plastic, we used 100% recycled plastic. This recycled plastic is made using waste materials from our other manufacturing processes.

3 No more plastic tube that can use up to a third of the amount of plastic as the actual product - just a 100% recyclable box.

Mini Micro Applicators (Length 85 mm, dia 2.5 mm handles)	100 pcs box	10 x 100 pcs box
G-9901 Regular (dia. 2.5 mm) Light Green	£3.95	£24.00
G-9902 Fine (dia. 2 mm) Medium Green	£3.95	£24.00
G-9903 Ultra Fine (dia. 1.5 mm) Dark Green	£3.95	£24.00

- For the placement of small controlled amounts of material in limited access areas.
- Economical - saving up to 80% by the reduction of excess materials used.

micro applicator tips

Our most environmentally friendly micro applicators:

1 By using a micro applicator tip with a reusable handle, you can reduce the amount the plastic that you would normally use by 80% when compared to a standard micro applicator.

2 Using an autoclavable handle saves plastic. Clean it, autoclave it and re-use it. Simple and effective.

3 Our micro applicator tips are packaged in a 100% recyclable cardboard box. Recycling can prevent pollution by reducing the need to collect new raw materials.

4 Instead of using new plastic for the micro applicator tips, we use 100% recycled plastic. The recycled plastic is made using waste materials from our other manufacturing processes.

Greenline air-water syringe tips

Reusable products are a great idea. Unfortunately, trying to clean the inside of a reusable metal air-water syringe tip is just not possible and if you can't clean it, you can't guarantee the effectiveness of its sterilisation. This means that using a disposable plastic air-water syringe tip is the only way to guarantee avoiding cross contamination.

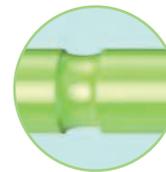

1 Our Greenline air-water syringe tips are made from 100% recycled plastic, using waste materials left over from our other manufacturing processes.

2 The Greenline air-water syringe tips are packaged in 100% recyclable cardboard boxes, instead of large plastic bags, helping to reduce the amount of plastic packaging in your surgery.

ez interdental brushes

1 We have designed the shape of our handle to be smaller and practical in size, so that it uses up to 65% less plastic than some leading brands

2 Instead of using new plastic we use 100% recycled plastic for the brush handle and 50% recycled plastic for the protective cap. This recycled plastic is made using waste materials left over from other manufacturing processes.

3 Unlike some other brands who package interdental brushes in unnecessarily large plastic boxes and bags, we use a cardboard box which is 100% plastic free. This means the box is easily recyclable

Greenline bamboo cups

Looking to cut down on plastic use? Switching to bamboo cups is a simple and easy change that can have a big impact on reducing plastic waste in your surgery. Here are some reasons to make the switch to using bamboo:

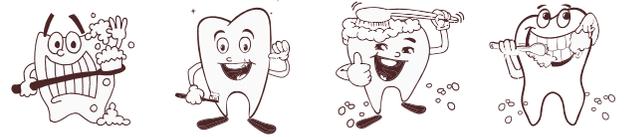

- 1 Bamboo is the world's quickest growing plant and provides a sustainable source of material. When bamboo is cut down to make paper it is able to quickly recover to be harvested again.
- 2 Bamboo absorbs a large amount of CO₂ as it grows, which helps to offset human carbon emissions.
- 3 Our Greenline outer carton is 100% recyclable.

- Leakproof construction, non-slip design
- Dispenses easily from cup dispenser due to their rolled lip
- Conveniently designed 170ml (6oz) size

Operation process

- #10 K-File: probing the root canal
- "R" : opening the root canal
- "E16" : establishing a glide path
- "S" series: shaping and finishing

Highlights:

"E16" pro-path file can be used instead of manual glide files.
"E16" pro-path file, perfect for root canal anatomy and can be adapted to most root canals. Is efficient in establishing a glide path and improves safety.

The efficiently cutting bur blades enable pressureless, minimally invasive preparation. The long, slender neck guarantees good visibility to the access cavity. Endoburs with L34 are particularly suitable for preparing under a microscope to ensure an optimum view of deeper areas of the pulp chamber, and showing the anatomy of the cavity chamber floor. This facilitates minimally invasive opening of root canal orifices and exposure of obliterated canals.

Efficiently cutting special endodontic bur used for detecting all root canals in the case of multirooted teeth. The H1SNL has a particularly high cutting efficiency and its long neck ensures a clear view in deeper regions of the cavity for opening the access cavity of the root canal system. Use in a contra-angle with micromotor at 1,500 - 2,000 rpm, without cooling, dry and apply only light pressure during preparation.

Special endodontic bur with a long, conical blade configuration and cross-cut used for preparing a funnel-shaped access in the pulp chamber. The cross-cut guarantees quiet, efficient removal of tooth structure. The rounded, non-cutting bur tip (safe end) prevents penetration into the root canal walls and pulp chamber floor. Application after removal of the pulp chamber roof using the endodontic bur 802L for extending the access opening to ensure successful endodontic treatment.

NTI PILOT BURS RA

RF210 (482)

Pilot burs for implantology stainless steel

opt. 1'000 rpm

Pilot burs have become indispensable for ensuring successful implantology. The requirements of these instruments are a high cutting capacity, reliable, quick cleaning and a high stability for cost-effective reuse. The highest quality stainless steel cuts very sharply. Additional hardening procedures of the steel ensure an economical service life.

The electrical polish ensures smooth surfaces, on which nothing sticks. The instruments can be easily cleaned and simplify preparation.

NTI MACD DEPTH MARKERS RA
by Dr Mark J. Caldwell, USA

MACD

Axial reduction instruments

opt. 40,000 - 85,000 rpm

Depth marking for all areas of crown and bridgework.

All-porcelain and CAD/CAM produced restorations place high demands on dental preparations. The success of a restoration depends to a high extent upon the compliance of the minimal wall thickness of the restoration (Teamwork 6/2007; Prof. Dr. Frankenberger et al.).

With these eight instruments it is possible to define the prepared margin at the depths of 0.3 to 2.0 mm.

MACD20 - Perfectly suited for occlusal all ceramic preparation

NTI SUPER COARSE TURBO DIAMOND BURS FG

The *Coarsest* Diamond Available for Bulk Reduction.

SUPER COARSE TURBO DIAMOND BURS incorporate Unimatrix® diamond bonding with stainless shanks. Turbo Diamonds have a diamond free zone or "continualspiral of blank space" which offers several advantages:

- The diamond free zone breaks the surface contact of the instrument at the operative site, allowing water to flow promoting a cooler and cleaner cut. This maximizes cutting efficiency and eliminates excessive heat generation
- Diamond free zones act like flutes on a bur which remove debris from the operative site. Since diamonds cut by grinding versus the chipping action of a carbide, Turbo's will not catch or grab at amalgam or metal
- The continual spiral design of the Turbo Diamonds leaves precise, smooth axial walled preparations
- Turbo Diamonds are available in friction grip FG Super coarse only (180µm diamond particle)

NTI SURGERY DIAMOND BURS ROUND RA/HP

Round diamond burs have been used successfully in surgery for many years. The medium grit size provides the option of use both in gingival contouring, the support area of pontics as well as reliable cutting performance for the window technique. The instruments are available with both a contra-angle shank and also a handpiece shank. This aids precision working. The high quality of the round diamond burs enables reliable preparation and allows repeated use. This ensures cost-effective working.

GSD1 Osteotom Surgery Diamond

The combination of special shaping and diamond coating results in close contact with bone structure, less heat development as well as a better removal of bone chips and tooth structure.

GSD1T Osteotom Surgery Diamond

For removing and smoothing bone as well as cutting tooth roots. The special shape together with the multilayer diamond coating ensure a gentle fit to the bone structure and thus less heat development. In addition, the high-performance **TiN** coating ensures optimum removal of bone and tooth substance as well as a long service life.

For cutting all-ceramic restorations such as zirconium oxide and other all-ceramic materials. The exceptional stability of the special diamond grit provides for a long service life of the **KT** diamond instruments. The multilayer electroplated bond prevents the diamond grit from loosening prematurely. This results in an optimal removal rate with low vibrations when cutting all-ceramic materials. The crown cutter **KT856** is to be placed at an angle of 45°. To remove an all-ceramic restoration, the restoration must be slit along its axial wall towards the centre of the occlusal surface or the incisal edge. The restoration is then bent open with a suitable instrument (lever), causing it to fracture. The **KT881** is suitable for grinding off fragment residues. Speed ideally 160,000 rpm, contact pressure < 2 N

Intraoral Trimming of Titanium Abutments
The use of titanium abutments in implant prosthetics requires special instruments for adjustments and adaptation, for example recontouring for adapting the path of insertion of the restoration on the titanium abutments. The tungsten carbide instruments with a coarse cross-cut, which were specially developed for trimming titanium alloys, guarantee optimal contouring of titanium materials (Figure 1). The titanium surfaces are then finished using the congruently shaped red ring finishers (Figure 2).

edenta **SOFT TISSUE TRIMMER FG**

Tissue Trimmer STT/FG-Shank:
Designed for soft-tissue surgery, the STT ceramic tissue trimmer is a rotary instrument that can be used as an alternative to electrosurgery and surgical blades. The biocompatible hard oxide point is said to cut tissue without burning. Applications include modelling gingiva, opening the sulcus for impression, freeing deep cavities, lacerating inter-radicular granulation-tissue, removing gingival hyperplasia/papillectomies, and exposing intra-osseous implant sections and retinated teeth.

Tungsten carbide instruments for the removal of adhesive residues after removal of orthodontic brackets. Used at low speed, the instruments are highly effective for the coarse removal of remaining adhesive and only create a slight roughness depth. The special cutting geometry enables targeted and low-vibration removal of soft adhesive residues. The egg shape is particularly suitable for palatal removal of the adhesive when applying the lingual technique. Advantages of the adhesive remover: a special **TiN** coating prevents smearing of the instruments' cutting edges. This allows for smooth and controlled removal of the adhesive residues, with only minimal heat development. Speed ideally 30.000 rpm

edenta e ADHESIVE REMOVERS FG/FGL/RA/RAL

The perfect completion of a bracket treatment. New adhesive remover, specially designed for this task. Removes adhesive residues, does not damage the enamel and creates smooth surfaces.

- The special blades remove the resin without injuring the tooth
- The safety bevel at the end of the blades reduces the risk of cutting striations in the enamel surface
- The various lengths of blade simplify trimming smaller and larger areas
- The safe-tip prevents injury to the gingival margin

OrthoFlex Polisher (adhesive remover)

There are several methods used for removal of residual resin after debonding of orthodontic brackets. Therefore, the method of removal of the residual resin is very important to avoid damages on enamel. However, carbide burs are harder than enamel and when used at high speed, can damage the underlying enamel. We recommend using our newly developed OrthoFlex Polisher which produces the finest scratch pattern with the least enamel loss. Advantages of the OrthoFlex polisher: Used for reliable, gentle removal of residual adhesive without damaging the natural tooth structure achieved by a special grit, which despite having a high polishing capacity is not harder than the natural tooth structure. Especially reliable alternative to adhesive or cement residue removal using rot ary diamond or metal instruments. After removal of the adhesive the teeth are re-polished using: Exa Cerapol 1 = pre-polishing enamel, 2 = polishing enamel, Cerapol Super 3 = natural high-lustre polish.

StripFIX finishing strip system

(handle for diamond strip holder with click-plug system)

Different diamond strip holders are available, which are simply clamped between the fingers and make working in the mouth extremely difficult because of the space availability. The newly developed StripFIX finishing strip system makes working with diamond strips easier and more controlled. A user-friendly, ergonomic handle with special grip recess ensures enhanced control for reliable use of the StripFIX finishing system. The click-plug system enables easy, quick replacement of the diamond strip holders.

The swivel-mounted diamond strip holders can each be locked in 4 positions. This ensures that the optimum working position (angle) of the diamond strip is fixed to enable easy access to the anterior and posterior teeth in the oral cavity. All components of the StripFIX finishing system are autoclavable and re-usable.

Application

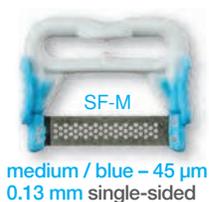

Used for removing cement after cementation of crowns, bridges, inlays, onlays or veneers. Used for finishing and polishing interproximal fillings and for removing excess filling material.

For dental hygienists to enable removal of discoloration that cannot be accessed with their instruments. In interproximal reduction (IPR), used for reducing interproximal enamel during orthodontic procedures.

StripFIX SET Contains one handle with special grip recess and 4 diamond strip holders.

STANDARD DIAMOND FINISHING STRIPS

Applications

- For contouring the proximal regions of all types of fillings
- Removing excess material from the proximal regions of filling - materials like composites, acrylics, glass ionomer cements and amalgam
- Removing excess cement after placing inlays, onlays and laminate veneers

Advantages

- Contours the proximal regions anatomically, Length: 147 mm
- Simplifies working procedures through the serrated edge which separates interdental spaces quickly
- The serrated diamond strips have wider non - diamond coated area, which simplifies sawing
- Serrated sawing edge and diamond - coated abrasive area combined in one instrument simplifies working procedures
- Made of highly stable stainless steel to resist breaking and stretching, for an economical service life

DISPOSABLE 60° TURN RECIPROCATING LATEX FREE PROPHY ANGLES

NO SPLATTER - The centrifugal force generated by a normal 360° turn prophy angle results in splattering and mess. Our **NEW 60° turn reciprocating** prophy angles eliminates potential splattering of prophy paste, blood and saliva, keeping the prophy paste in the cup where it belongs.

NO HEAT - Our **NEW 60° turn reciprocating** prophy angles build up much less heat during use, assuring a smooth, cool treatment for your patient.

EFFECTIVE - Due to less heat generated during use, if necessary more pressure may be applied to remove stubborn stains.

FASTER - Thanks to our innovatively designed **NEW 60° turn reciprocating** prophy angles, the prophy cup or brush can be used continuously on the tooth surface, saving valuable chair time.

SAFER - The rotational motion of traditional prophy cups and brushes can cause laceration and bleeding of the gums. Our **NEW 60° turn reciprocating** prophy angles provide a much safer and pain-free prophylaxis treatment.

All prices shown are VAT exclusive. All prices, including delivery, special deals and products are subject to change without prior notice. Premium Plus reserves the right to correct errors and omissions in any of our advertising (paper or electronic). Catalogues (prices and specials) will be deemed to be superseded on the issue of the most recent catalogue/flyer. Goods will not be accepted for return without prior authorisation. Customers must notify Premium Plus of a return within 7 days from the date of delivery. Returned goods received after this time or without prior authorisation may not be accepted. Costs incurred for the return of goods will be at the Customers expense, except in cases of incorrectly supplied or faulty goods. Returned goods must be in a re-saleable condition (inclusive of all original packaging, unopened and unused). Credit accounts are due strictly 30 days from the invoice date. In the event that the Customer fails to pay any monies by the due date, interest may be charged at the rate of 2% interest per month. The Customer is liable for all costs incurred by Premium Plus in the recovery of any debt, including legal fees and any other associated costs. Premium Plus retains ownership of the goods until they are paid in full. Premium Plus shall endeavour to dispatch all orders received before 3pm for either next working day delivery or tracked 48hr post dependant on order weight and value. However, delivery dates and times specified are approximate only. Premium Plus cannot guarantee delivery times and will not be held liable or responsible if any timeframes can not be met. Substitute goods may be supplied when those ordered are unavailable. Equipment warranties are as stated in catalogues/flyers or instructions and are considered void if not used as per instructions, or considered to be mistreated / incorrectly serviced or cared for. Terms and conditions will be provided prior to opening an account and will be deemed to be accepted once the account has been opened.
